Tests of the CarnaLife System application in Medcover Poland yield very good results.

Medicover Polska facilities are testing the CarnaLife System application for remote patient health monitoring. MedApp S.A. software cares for chronically ill patients with diabetes and cardiac problems treated in selected Warsaw facilities of our partner.

The test implementation of the software at Medicover involves using the CarnaLife System application to remotely monitor chronically ill patients. Selected patients, from two diagnostic groups (diabetology and cardiology), received sets of devices which were chosen by the Medicover medical team (medical specialists and a coordinating nurse). This enabled remote diagnostics at the patients' current location. In the whole process, patients equipped with peripherals can record their diagnostic data at any time and send them to the medical facility. Professionals at the facility can intervene if necessary. All results are interpreted by artificial intelligence (AI) algorithms. This provides specialists with information about abnormal events. Patients enjoy the comfort of contacting a specialist at any time safely via video consultation and receiving recommendations for their diagnostic process.

The first conclusions are as follows: a definite improvement in patient comfort, automation of treatment processes which translates into the efficiency of physicians' and specialists' work, reduction in the number of potential hospitalizations of chronically ill patients, reduction in the number of complications, convenience for physicians and patients alike, and more effective treatment.

You are welcome to watch the whole material:

Persons responsible for CarnaLife System implementation in Medicover facilities and for testing:

- Dr. n. med. Piotr Soszynski, Strategic Medical Advisory Director, Medicover
- Lek. med. Katarzyna Krysztopowicz-Sobura, Medicover
- Michał Adamczyk, Strategic Project Management Director, MedApp S.A.

We are glad that together with an exceptional partner, such as Medicover, we are creating the future of medicine, and the practical use of our application for remote patient monitoring, CarnaLife System, has been appreciated by experts, physicians and the patients themselves.
